

EPX400 *multifunctional transmitter*

The combination of EX and PX-series transmitters -for packet data in real time using GSM network in GPRS and SMS channels and Ethernet.

EPX400 is the newest transmitter in EBS range of products. Multifunctional, reliable, tailored to the needs of each market.

You can get basic version or order individually configured transmitter* according to the needs. Thanks to its numerous features, our unit will work for years, adapting to the changing market and technological requirements.

EPX transmitters are offered independently or in sets with casing, AC adapter and battery. Support for devices in monitoring station is carried out by **Monitoring System Receiver OSM. Server.** It is offered in the form of independent receiver ensuring complete transfer reliability thanks to redundancy, which protects receiving system if part of the system is damaged, or as server software for Windows.

FEATURES OF EPX400:

Basic version:

- 2G module
- 3 transmission channels: Ethernet, GPRS/SMS, Voice
- INPUTS: 9 (EOL/DEOL)
- OUTPUTS: 2 (1 OC + 1 relay)
- Power supply on board

Full option transmitter:

- 2G or 2G+3G module on board (UMTS 5 band)
- Dual SIM
- Remote control of control panels
- 3 transmission channels: Ethernet, GPRS/SMS, Voice
- Remote switching of external GSM antennas – jamming detection or poor signal
- Overvoltage protection of PSTN line
- Radioline on board

USER BENEFITS OF EPX400:

➤ Time & cost saving

- Simple and fast reconfiguration via SMS, GPRS or CSD
- Diagnostic mode for the installer
- All necessary functions in one device
- Remote technical inspections and servicing
- Sent text messages quantity control, incoming messages retransmission

➤ The reliability of information transmission

- Protocols: SIA Level 2, ContactID, Ademco Express
- SMS messages

➤ Security & quality

- Protection against unauthorized device access
- Encryption of transmitted data by AES standard
- Automatic retrieving of the connection with the monitoring station
- Transmission protection in case of a server damage
